

# ALTERNATIVE & RENEWABLE ENERGY

**Renewable and alternative energy systems provide an opportunity to reduce the environmental impact of energy production. This supports the Province's commitment to address climate change and reduce dependency on non-renewable resources as implemented through the Green Energy Act. Development of these systems requires a range of approvals, navigating through new and developing policies to address stakeholder interests.**

MHBC's broad range of professional experience and our focus on creative and practical solutions allows us to respond to evolving industries and dynamic policy frameworks. We use our experience in public consultation, training in facilitation and strong project coordination skills to guide projects through the approval process. We continue to monitor the changing policy and regulatory environment and are members of various energy industry associations.

# Our Alternative and Renewable Energy Services Include:

Planning Services for biogas facilities, energy parks, solar, wind turbines and alternative fuels

Planning opinions regarding conformity with Provincial Legislation and Policies

Project Management

Representation at public / council meetings

Public/Stakeholder Facilitation

Cultural Heritage Landscape Assessments

Visual Impact Assessments

Agricultural Impact Assessment

Landscape Plans

Tree Preservation Plans / Certified Arborists

Site Searches (GIS Analysis)

Post approval implementation

Site Plan Design (AutoCad)

Mediation

Expert Testimony at Tribunals

Due Diligence
